AB - J08283596 A surface-treated pigment contains substantially no
sulphonic acid gps. inside the particles and bears sulphonic acid gps.
only on the particle surfaces.

- USE - The surface-treated pigment is useful for printing inks, paints,
cosmetics, inks for writing instruments, toners, liq. developers,
electrophotographic materials, recording materials for ink jetting and
colourants for plastics.

- ADVANTAGE - The pigment has excellent initial dispersibility and long
dispersibility in water and organic solvents without aggregation and
precipitation on long storage. The method (hydrophilisation treatment
method) improves dispersibility of pigments.
